Natively supported or TWAIN compatible flatbed or sheet fed scanner. If working with image files or pre-defined templates, no scanner required.

## DESCRIPTION

- **The Small Business Digital Power Pack** is a collection of two of our best selling software programs designed to organize any office for the digital age. Featuring Formulator 2.5 our best selling electronic forms software and FineReader 4.0 Sprint OCR program. **FineReader SPRINT** is a great OCR scanning program featuring Full Color OCR & full layout retention, which enables you to turn your scanned documents into editable electronic files in seconds. **Formulator 2.5** is the perfect program to convert your scanned forms to workable electronic forms fast from any kind of paper form. Power Pack users will never have to fill out a form by hand or re-type a document again!
- **FineReader 4.0 SPRINT:** turns your scanned documents into editable electronic files in seconds. This versatile optical character recognition (OCR) scanning software features full-color OCR and full layout retention. FineReader seamlessly saves your documents to popular office programs such as Microsoft Excel, Word, and other Office 2000 applications, as well as in WordPerfect and WordPro formats. It retains page layout, including columns, tables, graphics, and fonts. And, if you've got a document that's less than ideal to begin with, no worries--you'll still get great results, and you'll never have to retype a document again.

FineReader Sprint 4.0 delivers over 99 percent accuracy. One-button scanning and recognition makes using the software a breeze. This program recognizes typographic text in 53 languages, ranging from Afrikaans to Ukrainian and every language in between. Save recognition results in text and Rich Text file formats. FineReader handily batch-processes images with great speed and identifies unrecognizable characters by bolding text. You can manually mark blocks as well as set scanner brightness and resolution. With full support for the Twain protocol, this program is compatible with just about every Twain-compliant scanner available.

- **Formulator 2.5:** is one of the fastest selling personal form management software programs available. Designed for both personal and business use, Formulator 2.5 enables anyone to quickly turn any paper form into a digital form fast. In an age where practically everything is done by computers, have you ever asked yourself why most forms still need to be completed by hand? The truth is they no longer have to be - thanks to Formulator! When using Formulator 2.5 the user can either scan in a form or bring in a form from a graphics file and create a digital template, complete your data on screen, and print out your new form in no time. The completed entries can either be printed on the original form it self (this being fed into the printer), or alternatively, the program can print out a copy of your newly created digital form, and include your entries on it. All you need is a pc, a scanner, and a printer.
